PROFILE

Senior Python/Django engineer with six years of experience building and owning production backend systems in cloud-hosted SaaS, much of it in healthcare and other environments where data integrity, auditability, and controlled releases are non-negotiable. I have shipped Django and DRF platforms end-to-end, integrated with EMR and financial systems under compliance constraints, and maintained the quality gates — automated testing, code review, structured logging — that regulated delivery depends on. Comfortable across the full stack (React/TypeScript front ends) but strongest in Python backends, PostgreSQL, Docker, and AWS. Currently completing an MSc in Data Science at Leeds Beckett University.

TECHNICAL SKILLS

Languages: Python (expert), TypeScript / JavaScript (expert), SQL, Node.js — all in production at scale

Backend & APIs: Django, Django REST Framework, FastAPI, Flask, NestJS, Express — REST, WebSockets, multi-tenant SaaS, OpenAPI/Swagger

Databases: PostgreSQL (primary), Redis, MongoDB — schema design, query optimisation, reconciliation, data integrity

Testing & Quality: PyTest, Jest, React Testing Library, TDD, code review, CI/CD quality gates (GitHub Actions), 80%+ coverage

Cloud & Infra: AWS (EC2, S3, Lambda, RDS), Docker & Docker Compose, Linux, Ansible, Kubernetes/Helm (familiar), Vercel

Security & Access: JWT, RBAC, secure REST APIs, audit trails, healthcare-compliance, and data-consistency constraints

Frontend: React, Next.js, Redux Toolkit, TypeScript, D3.js — component-driven UI and real-time data visualisation

Data & AI: LangChain, Pydantic AI, OpenAI API, PyTorch, TensorFlow, ETL pipelines

PROFESSIONAL EXPERIENCE

Senior Full-Stack Software Engineer • Code & Care Apr 2022 – Present

Software development & out-staffing company — embedded in client engineering teams • Remote

Client: TOCA Social · Oct 2023 – Nov 2025 · London, UK

- Designed and maintained public REST APIs and WebSocket services (Node.js/TypeScript) for real-time, multi-venue synchronisation on a distributed microservices architecture on AWS, meeting high-concurrency and low-latency requirements.
- Owned the TOCA Connects integration layer — a cross-studio data-synchronisation service connecting internal platform services to third-party venue-management systems, with the reconciliation and consistency guarantees enterprise integrations demand.
- Cut backend API latency by 30% via profiling, query optimisation, and caching; introduced structured logging and monitoring that shortened mean time to detection on production incidents.
- Maintained 80%+ test coverage (Jest, React Testing Library) and embedded quality gates into CI/CD (GitHub Actions) to prevent regressions at scale.

Client: FMG (Fulton Market Group) · Apr 2022 – Aug 2023 · Australia

- Built high-throughput internal REST APIs in Python (Falcon) for a multi-tenant supply-chain SaaS platform, with strict validation, error handling, and full OpenAPI documentation.
- Delivered real-time operational dashboards (WebSocket-driven Python backends, D3.js/React), giving operations teams live visibility over 20,000+ monthly shipment events.
- Introduced structured logging, polling fallbacks, and fault-tolerance patterns across distributed services, significantly reducing on-call incidents.

Full-Stack Software Engineer • Intron Health Nov 2021 – Mar 2022

Healthcare technology — EMR integration under compliance constraints • California, US • Remote

- Built ETL pipelines integrating AI transcription output with downstream EMR systems via structured PostgreSQL schemas and secure REST APIs, meeting data-accuracy, consistency, and audit-trail requirements under healthcare-compliance constraints.
- Developed preprocessing and data-augmentation tooling for STT/ASR model training (PyTorch, TensorFlow), capturing 300+ accent profiles with measurable gains in accuracy and pipeline repeatability.
- Wrote comprehensive integration specs covering data flow, failure modes, and rollback behaviour, giving the team a reliable reference for asynchronous review across time zones.

Full-Stack Software Engineer • Amenta Media AB (Likvio) Aug 2021 – Dec 2021

Fintech SaaS — Django/FastAPI platform build • Gothenburg, Sweden • Remote

- Built Likvio's backend platform from scratch with FastAPI and Django REST Framework, integrating the Fortnox financial API to automate contract lifecycle and invoice synchronisation — with robust error handling, retry logic, and reconciliation.
- Managed high-volume background processing (Celery, PostgreSQL), maintaining 100% data integrity across concurrent financial-exchange operations.
- Authored complete Swagger/OpenAPI documentation covering endpoints, authentication flows, and error schemas, enabling external developers to self-serve integration.

Software Engineer • V3C Technologies Jan 2021 – Apr 2021

Multi-role education platform • Abuja, Nigeria

- Designed Flask REST APIs with JWT authentication and role-based access control (RBAC) across teacher, parent, and student portals — an access model directly applicable to enterprise SaaS user provisioning.
- Standardised API lifecycle documentation (Swagger/OpenAPI) and implemented architectural improvements that reduced developer integration time by 30%.

Full-Stack Python Developer • eHealth4everyone Dec 2019 – Jan 2021

Health-data / DHIS2 platform — regulated public-health domain • Abuja, Nigeria

- Built and managed a DHIS2 hosting platform (Django, Ansible), automating server provisioning and configuration management — infrastructure-as-code at scale in a public-health data context.
- Designed and deployed high-availability data APIs (Django REST Framework, Redis, AWS EC2/RDS) for the HealthThink dataset; Redis caching and AWS auto-scaling improved throughput by 40%.

EDUCATION

MSc Data Science (in progress) • Leeds Beckett University Sep 2025 – Sep 2026 (expected)

Machine learning, statistical modelling, NLP, and algorithmic complexity applied to real-world data engineering and AI systems.

BSc Computer Science • Bingham University Karu Sep 2014 – Sep 2018

CERTIFICATIONS

AWS Machine Learning Foundations — Amazon Web Services
